In November of 2009 at Graphics Canada in Toronto Halcraft Printers made the decision to go big in the area of UV Coating, being one of the first to offer UV coating to the commercial print market east of Quebec. Brian and Wayne Arkelian (owners of Halcraft Printing) introduced UV coating to their clients in the summer of 2009 with the entry level Graphic Whizard Micro UV coater. The intentions were to upgrade within 6 months to a year. They did just that. With the 29.5" x 25" sheet size of the XDC-750A, Halcraft has the ability to run sheets directly from their Heidelberg SM-74 5 color, or digital sizes from their Xerox 5000. Bill Todd of Graphic Supplies and Equipment did a great job working with Halcraft to determine their needs and help them choose the machine that would be the best fit to continue to grow their UV coating business.
